Science-The human body

I can name the body parts and label.	I understand that everyone's body is different. You might be tallest but not have the largest feet.	How not being able to see makes simple tasks a challenge e.g. crossing the road.
I can discuss the uses of some body parts e.g. eyes, ears, mouth, nose.	How sound travels to our ear so we can see.	How we taste due to taste buds. Our smell helps us with our taste.
